New Hires to Spur CEC Water, Wastewater Capabilities

September 3, 2015

BRIDGEPORT, WV — Civil & Environmental Consultants, Inc. (CEC) will expand its water and wastewater engineering capabilities in northern West Virginia through the hiring of three civil engineering professionals in the firm’s Bridgeport office.

The office has seen continual growth in revenues and staff since opening in 2012, providing civil, environmental, and survey services to the mining, oil and gas, and real estate industries. Offerings will now also include water and wastewater collection, transmission, and treatment solutions.

Gary J. Fazalare, P.E., vice president, brings 22 years of experience to his role as the Civil Engineering practice lead for the office. His expertise includes engineering design and construction management for wastewater collection and treatment systems, water distribution systems, and raw and finished water transmission and treatment projects. Fazalare earned a bachelor’s degree in engineering technology from Fairmont State University and has held leadership roles in several local professional and civic associations.

The practice will gain further diversification and combined experience in providing water and wastewater engineering through the addition of Steven A. Cain, P.E., and Jeffrey J. Boyles, P.E.

Cain is a principal with 22 years of experience including land surveying, site development, construction engineering, water and sewer facilities inspection, and design of sanitary sewers, networks, wastewater treatment systems, and potable water distribution and treatment systems. He earned a bachelor’s in civil engineering technology from Fairmont State University. Boyles, a project manager, has eight years of experience in water distribution systems, sanitary sewer collection systems, and general site design. He received a bachelor’s in civil engineering from West Virginia University.

For more information about CEC’s water and wastewater capabilities, contact Dennis Miller, P.S., vice president and Bridgeport office lead, at dmiller@cecinc.com or by calling 304-933-3119.
